Product Description

1.60 Photochromic Anti Blue Light AR Coating Single Vision Lenses

Product Description:

One of the standout features of our Single Vision Lens is its impact resistance. This lens is designed to withstand impact and resist damage, making it an excellent choice for those who lead an active lifestyle or work in hazardous environments. You can rest assured that your eyes will be protected from injury while wearing our Single Vision Lens.

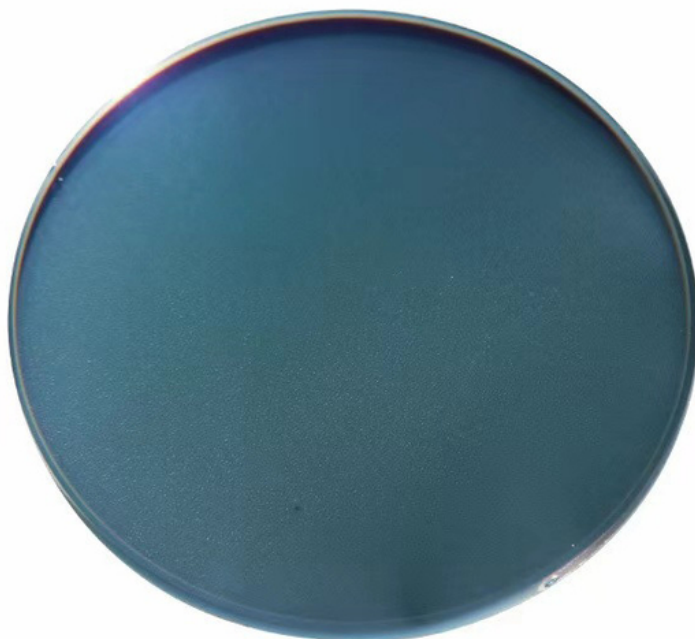

Our Single Vision Lens also comes with a durable green coating that helps to reduce glare and improve the clarity of your vision. The green coating not only looks great but also enhances the performance of the lens, especially in bright light conditions.

The Abbe Value of our Single Vision Lens is 32.0, which means that it provides excellent visual acuity, even at the edges of the lens. With this lens, you can enjoy clear and precise vision, no matter where you're looking.

UV Protection is another essential feature of our Single Vision Lens. With UV-1/UV-2 protection, your eyes will be shielded from harmful UV rays, which can cause long-term damage to your eyesight. You can enjoy the sun without worrying about damaging your eyes while wearing our Single Vision Lens.

The Index of Refraction for our Single Vision Lens is 1.60, which means that this lens is thinner and lighter than most traditional plastic lenses. This makes our Single Vision Lens a comfortable and practical choice for those who don't want to feel weighed down by their glasses.
