Product Description

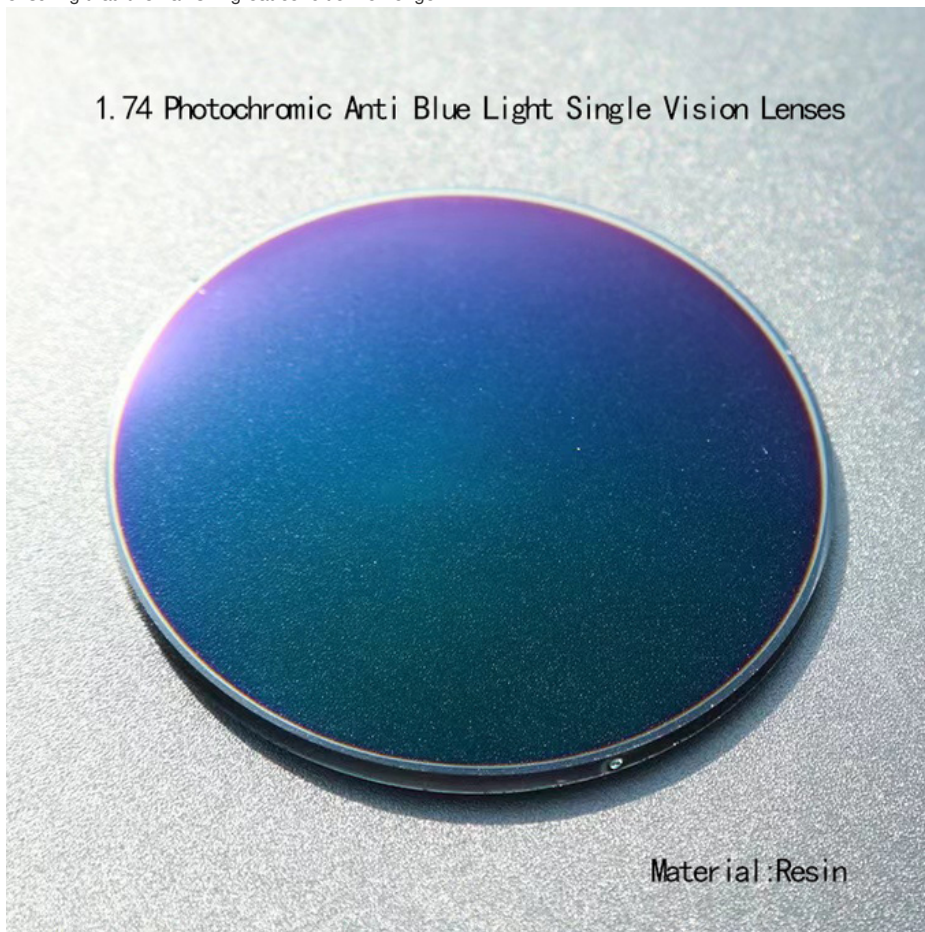

1.74 Photochromic Anti Blue Light AR Coating Single Vision Lenses

Product Description:

The single vision lens is ideal for individuals with a single visual prescription, such as nearsightedness or farsightedness. This lens provides a uniform level of magnification across the entire surface, ensuring that everything you see is clear and in focus. In addition to its excellent visual performance, our single vision lens is also designed with impact resistance in mind. This means that it can resist impact from everyday accidents, such as drops or bumps, making it a great choice for those who lead an active lifestyle or work in a high-risk environment.

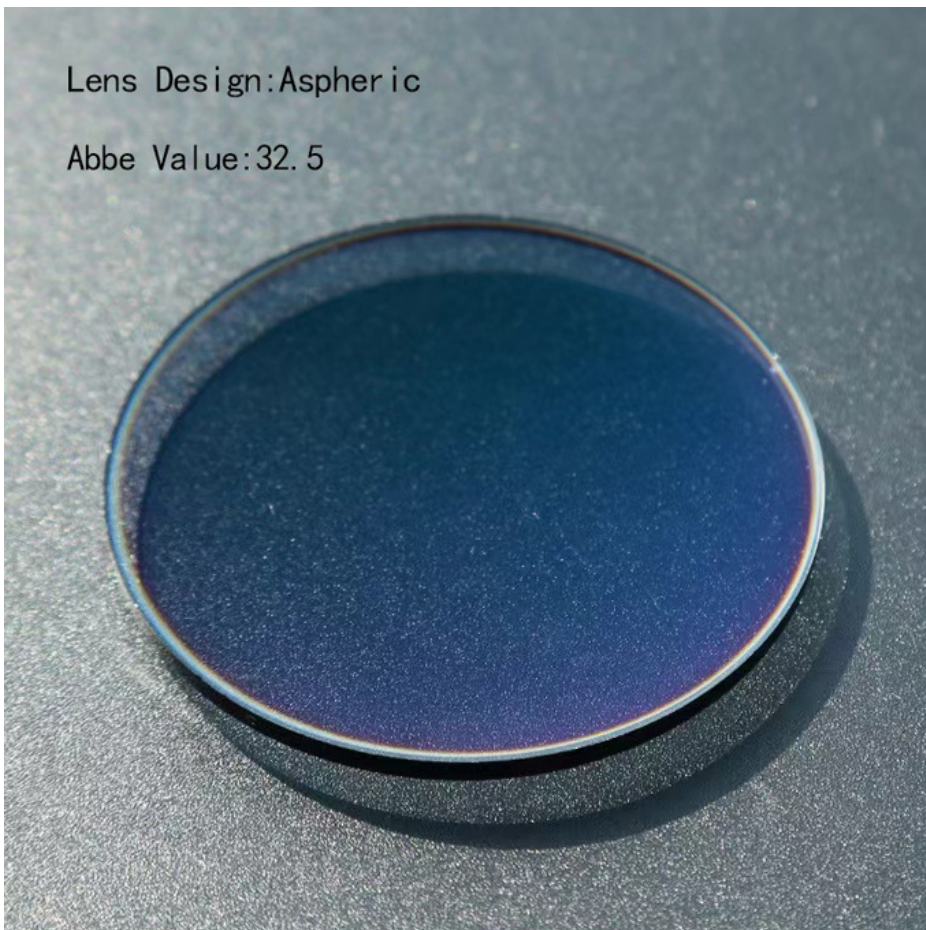

Our single vision lens is treated with a high-quality AR coating. This coating helps to reduce glare and reflections, improving visual acuity and providing a more comfortable viewing experience. It also helps to protect the lens from scratches and other forms of damage, ensuring that it remains in great condition for longer.
