## Product Description

### Product Description:

Flat-top color-changing blue-light blocking lens technology sets this product apart from other spectacle lens areas. It contains special molecules that react to ultraviolet rays, causing the lenses to darken outdoors and regain clarity when indoors. This makes it ideal for those who want to protect their eyes from harmful UV rays without having to change into sunglasses every time they go out. The lens diameter of this flat top color-changing blue light blocking lens is standard, which means it fits most spectacle frames. This makes it a versatile product that can be used by anyone, regardless of its frame size or shape. The lens is also scratch resistant, which means it can withstand the wear and tear of everyday use. This feature makes it a low-maintenance product that requires minimal maintenance.

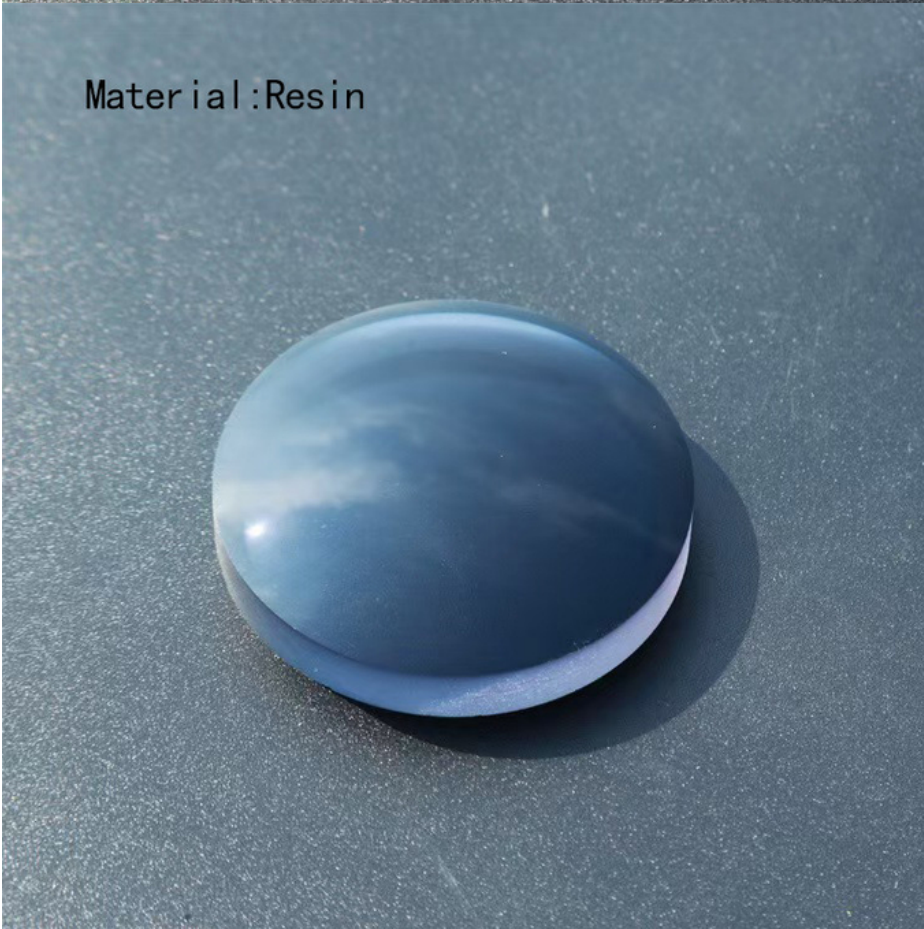

### Flat Top Bifocal Anti blue Ligh Photochromic Semi-finished

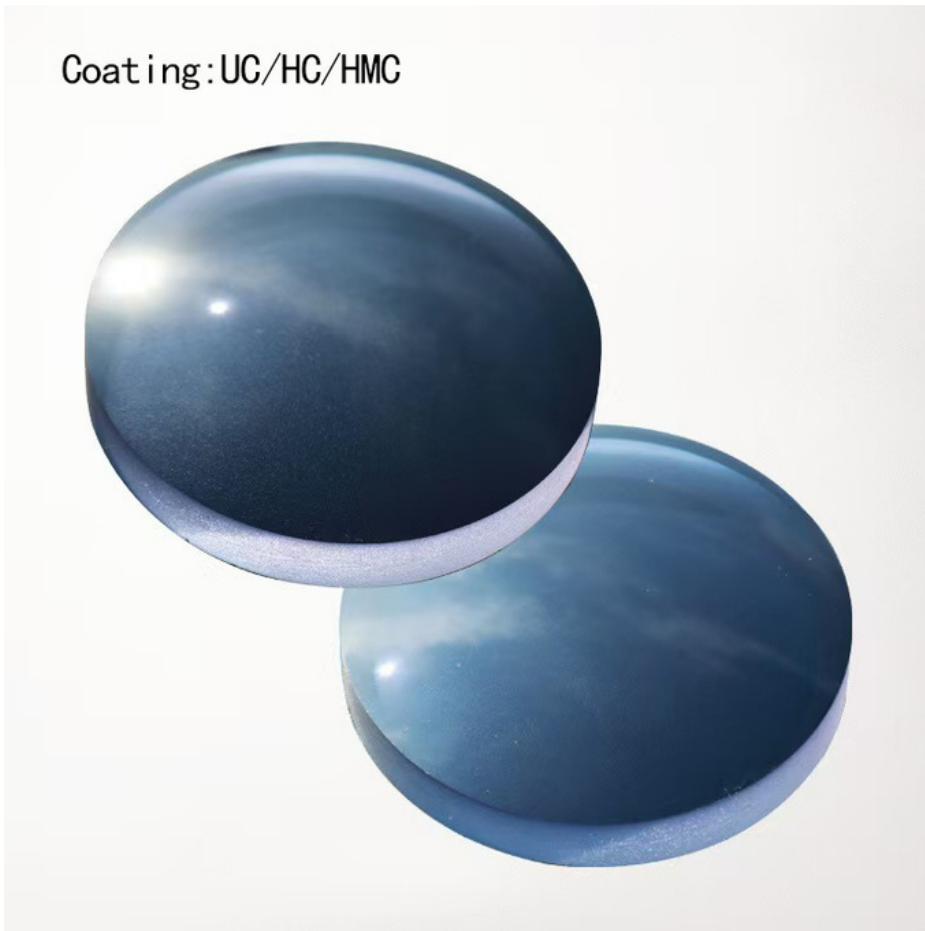

Camber : 50/200/400/600

Material : Resin

Coating: UC/HC/HMC
