## Product Description

### Product Description:

Our PC anti-blue light graying lens product is a type of spectacle lens that can adapt to different lighting conditions. This means that when exposed to bright light, they turn gray, and when the light is darker, they become brighter. With our photochromic lenses, you don't have to change glasses or wear sunglasses when you're outdoors or in different lighting environments.

Our PC anti-blue light greying lens products are designed with semi-finished lenses, which means they are partially produced and need to be done by an optician to meet your specific prescription requirements. This ensures that your lenses are perfectly aligned with your vision needs, providing you with the best possible clarity and comfort.

Our photochromic lens product is the perfect choice for those who require eyeglasses that can adjust to different lighting conditions while still providing optimal vision and comfort. With our high scratch resistance, thin lens thickness, standard lens diameter, and semi-finished lens design, you can't go wrong with our photochromic lenses. Order yours today and experience the difference that our lenses can make!
